"Full production line formed by the following modules, parts and accessories:"

Full production line introduction: The bottles are fed and sorted by the automatic elevator and unscrambler, and conveyor to the filling station for shampoo or repellent water filling. Once the filling is done, they will be sent to the capping station. Caps of different types will be fed and sorted by the caps elevator and cap unscrambler and then inserted into the bottles which will be tightened soon. When capping process is completed, these bottles will be conveyed to the labeling station for sleeve shrinking labeling with the help of steam generator, next it's air drying for the bottles. Final bottles/ products will be discharged and collected on the rotary turntable.
